

AVAILABLE SOON!

Quickly create patient scenarios by selecting a breathing mode and customizing parameters.

QuickLung Breather™ **Be Spontaneous!**

Supporting the efforts of the spontaneously breathing patient is critical in mechanical ventilation and new ventilator modes continually strive to address this. To effectively demonstrate and test patient-ventilator interaction, the ability to simulate spontaneous breathing is essential.

In the past, this feature has been found only in higher end breathing simulators. Now IngMar Medical's new QuickLung Breather provides a sophisticated tool to represent a spontaneously breathing patient – at an affordable price!

The QuickLung Breather opens up new opportunities to demonstrate and test ventilator triggering and important modes of ventilation such as SIMV, Pressure Support and PAV. You can purchase the QuickLung Breather as a package or retrofit your existing QuickLung® in seconds. Compact and easily portable, no other test lung performs at this level of precision and versatility at this price.

Easily change rate, volume, patient type ... even disease state!
